WEB3 Inu

Ticker: **WEB3**

What is Web3 Inu?

Web3 is an umbrella term for an online ecosystem that cuts out the big middlemen on the Internet. Platforms on Web3 are not owned by central gatekeepers and you wouldn't navigate the Internet through search engines such as Google. It uses blockchain, the same system used by cryptocurrencies and non-fungible tokens (NFTs).

Web3 Inu is a Rent-To-Earn token concept based in real world data interacting in two different layers: On-Chain and Off-Chain.

犬 (Inu) means doge in Japanese language. The meme coin movement rejects formalities and protocol. Web3 Inu is a Doge based on Web3 idea to embrace blockchain and transparency, allows users to rent, buy, upgrade and sell real-life businesses worldwide.

DISCLAIMER

Web3 Inu including but not limited to the overall project, the token, website, smart contracts and any apps ("WEB3 INU") as presented in this conceptual paper is not an licensed, unlicensed or exempted financial or payment service of any kind and in any jurisdiction. Any terminology used in this Whitepaper, on the Website or within the app is intended only as a basic reference, without any effective or legal meaning of the same terms in a regulated and/or financial environment. WEB3 INU is a fully and completely decentralized and community driven project and does not have owners, shareholders, promoters, marketers, managers, directors or other figures or entities exerting any form of governance; the WEB3 INU smart contracts are open-source, security audited, permanent and non-modifiable in any way. The WEB3 INU token is a strictly utility token in any jurisdiction and is not and can not be considered as a security or otherwise a regulated token of any kind, is not in any way e-money and/or a fiat or asset backed stablecoin, whether global or limited in scope. This Whitepaper taken by itself is not a contract or a contractual agreement of any kind, is not an invitation, solicitation or offer to invest in WEB3 INU or acquire or use its WEB3 INU tokens in any way and with any expectation of profit in any form. Any user of WEB3 INU declares to have received appropriate technical, administrative, regulatory and legal advice before and after accessing and/or reading this Whitepaper, the website and using any portion or element of WEB3 INU (including any WEB3 INU token therein) and accepts that there is an inherent high risk in accessing, acquiring or using any kind of blockchain and/or crypto system, token, platform, software, interface including WEB3 INU and further acknowledges with full disclaimer for any community member directly or indirectly involved with WEB3 INU, that there can be any kind of damage suffered, including total loss.

Tokenomics

- **55.00% Total Token Burn** at listing on Pancake Swap
- **1% Reflection** (1% for Buy and 1% for Sell Tax)
- **Deflationary token** (Every transaction burn a further 0.55% of the transact volume)
- **Anti Bot** (15 seconds lock after buy to sell, prevents Vampiric Bot)

Total supply:

100 Trillions

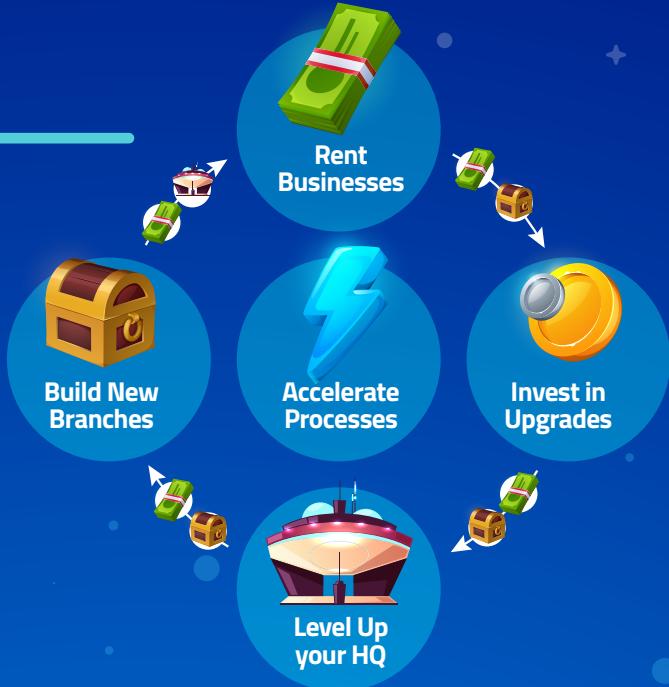

Burnt at start:

55 Trillions

Web3 Inu Rent to Earn Game Concept

When you first enter the game

Once you enter the game for the first time, Tom will greet you and tell you everything you need to know so you can get started. Initially, you will be given a Branch for free, which will allow you to start renting new Businesses based on the amount of money and XP you have. As the game progresses, you will be able to move your Businesses to new Branches. Tom will give you challenges to complete that will provide you with currency as rewards.

Currently, the Off-Chain Economy consists of four main actions:

Build, Rent, Upgrade and Sell.

Upgrades

As you make upgrades to your Businesses and keep building your empire, your XP will increase and you will have new benefits each time. This way you will get access to more Branches, Categories, and so on.

You will also be able to accelerate the upgrade process **using gold or watching ads.**

Renting

Off-chain players will be able to Rent Businesses from On-chain users through contracts. This activity will not impair the Off-chain players' economy or their actions throughout the game.

WEB3INU\$

WEB3INU \$ are blockchainized Tokens (Like any cryptocurrency) that you can buy, trade, use and spend, on the WEB3, On-Chain layer of Web3 Game. You will be able to buy them with cryptocurrencies and FIAT inside the game and secondary markets.

Also, NFTs will generate WEB3\$ as yield farming from the presale up to the On-Chain layer release and before it, as the core game mechanic.

Types of NFTs

There are two types of NFTs within the game. Special and Iconic Locations are those preminted NFTs that any player can purchase and, as said before, generate WEB3\$.

The second type of NFT is Ownership Certificates. These NFTs will be minted on request by players. These NFTs will be owned wholly, perpetually by the player, and only the player will decide their use. This Certificates will also produce income passively

Buying and Rent

When you buy an On-Chain property it means you are minting an NFT. The offer of NFTs available is going to be controlled by WEB3 Central Bank, during periods of time called Seasons.

At the end of the season, depending on the category and tier of the purchased property, as the NFT owner, you will be able to earn Tokens accordingly.

If the business is rented by an Off-chain user, you will gain more Tokens. This creates a merging of both economies which we will explain later on.

Future changes

We are working on constantly improving WEB3 GAME for the years to come, so in the future, there may be more tiers, new categories, or split categories, but only for the benefit of the NTF owners. The value of the NFT can be affected and raised. Otherwise, it will not devalue its value, meaning it will not get lower no matter how many tiers or categories appear in the future.

Selling

Your options as an NFT owner

You will have two options when it comes to selling Business (NFT) to others. It can be through a direct offer or auction into the game and via external marketplaces such as Binance NFT MarketPlace or Web3Inu MarketPlace..

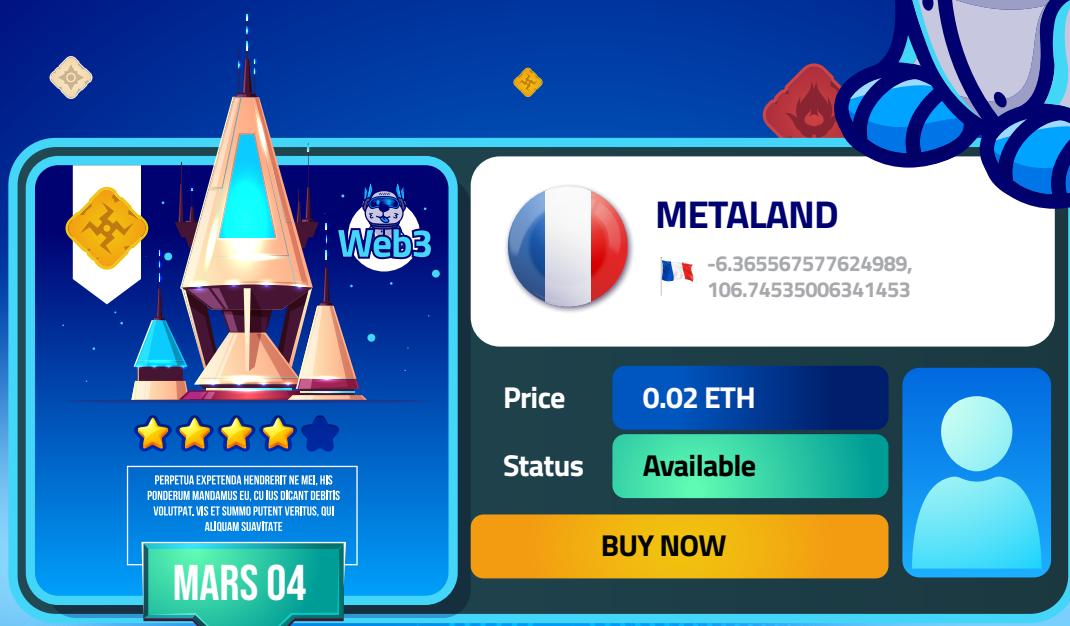

Merging Both Economies

Putting up for Rent and Renting Dynamics

The NFT owner can publish a contract on a public board that fully controls its renting conditions. They will be able to set:

- The time duration of the rent
- The initial payment or current purchase payment
- Both percentages of incomes for the renter and the lessor in soft currency/cash.

MARS 04

PERPETUA EXPETENDA HENDERIT NE MEI, HIS PONDERUM MANDANUS EU, CU US DICANT DEBITIS VOLVITAT, VS ET SUMMO POTENT VERITUS, QUI ALIQUAM SUAVITATE

METALAND

-6.365567577624989,
106.74535006341453

Price: 0.02 ETH

Status: Available

BUY NOW

The Off-Chain Businesses will have a standard contract with their current values for renting.

Conclusion

With these interactions, both sides of the game will be actively interconnecting and constantly yielding income for both parties. What happens On-Chain will affect Off-Chain and vice versa.

On-Chain players will want to put their business for rent to expand and upgrade their NFTs while, on the other hand, Off-Chain players will be able to get better deals and contracts through these exchanges.

The market will rule the game and, the best deal maker will be on top of it.

What is Web3?

To understand Web 3, it makes sense to understand what comes before. The first version of the Internet – known as Web 1 – arrived in the late 1990s and comprised of a collection of links and homepages.

Web 2 then comes next. Some people call this the “read/write” version of the internet, in reference to a computer code that lets you open and edit files rather than to just view them. This version of the Internet allows people to not only consume content, but also to create their own and publish it on blogs like Tumblr, Internet forums and marketplaces like Craigslist. Later, the emergence of social media platforms including Facebook, Twitter and Instagram took content sharing to new heights.

Web 3 can be understood as the “read/write/own” phase of the Internet. Rather than just using free tech platforms in exchange for our data, users can participate in the governance and operation of the protocols themselves. This means that people can become participants and shareholders, not just customers or products.

In Web 3, these shares are called tokens or cryptocurrencies, and they represent ownership of decentralized networks known as blockchains. If you hold enough of these tokens, you will have a say over the network. Holders of governance tokens can spend their assets to vote on the future of a decentralized lending protocol.

What can you do on Web 3?

Web 3 makes the proliferation of cooperative governance structures for once-centralized products possible. Anything at all can be tokenized, whether it's a meme, a piece of art, a person's social media output.

With Web 3, gamers can invest in the game itself and vote on how things should be run. Large Web 2 companies, like Meta and Ubisoft, are creating virtual worlds powered in part by Web 3. Non-fungible tokens (NFT) will also play a huge role in reshaping the gaming industry by allowing players to become the immutable owners of the items they accrue.

WEB3 Inu Roadmap

Phase 1 Launch

- 20,000 Holders
- Website Launch
- CoinGecko Listing
- CoinMarketCap Listing
- 20,000 Telegram Members
- TrustWallet Token Update
- TokenPocket Update
- Coinbase & BscScan Update
- Marketing Campaigns
- WEB3 GAME ASSETS DESIGN
- WEB3 GAME SMART CONTRACT
- WEB3 NFT MarketPlace
- Binance NFT MarketPlace
- CEX Listing – Hotbit, Gate, Kucoin, Bybit
- Venture Capital Accelerators for NFTs
- Off-Chain Merchants Recruitement

Phase 2 Growth

- 50,000 Telegram Members
- 100,000 Holders
- Website Redesign
- WEB3 INU Game Beta launch
- WEB3 INU Rent to Earn Off-Chain Integrate
- WEB3 INU NFTs Airdrop to Phase 1 Holders.
- WEB3 Android & iPhone Release
- Brand Ambassador Program
- Influencer Marketing Partnerships
- Roadshow at Multiples Cities & Convention.

Phase 3 Expansion

- CEX Listing - Huobi, Binance, Coinbase, Kraken, OKex
- 200,000 Telegram Members
- 500,000 Holders
- Metaverse & Web3 Chain Testing & Launch
- ETH, Polygon, Cardano, OX Cross Bridge

Thank you
